MOJOTROLLS

GUARDIANS OF THE M'ETAVERSE

LITEPAPER (February 2024)

MojoTrolls.io

MOJOTROLLS INDEX

MOJOTROLLS INTRO

The MojoTrolls Project is born from multiple passions, carefully molded through years of creation to cultivate the ultimate community of crypto and NFT enthusiasts who value the idea of an ecosystem built on creativity, loyalty, and co-creation.

Whether the initial interest is in laying the foundation for a close-knit community, the support for co-creation, onboarding of your friends, input in the fantasy novels, Artificial Intelligence, business ventures of the MojoTrolls Brand or just simply the innovative tokenomic model that allows for sharing in rewards as a community. As the honor of MojoTrolls dictates, we've got you and support you.

In this Litepaper we deconstruct the plans for MojoTrolls and how it all ties in together. Heed this friendly warning... you might feel the Mojo flowing by the end of this Litepaper. You are always welcome to seek out your destined Clan of the MojoTrolls, choose wisely!

MojoTrolls Mission

There are three main pillars to the MojoTrolls NFT Project.

1. Community

2. Ecosystem

3. Evolution

Our Mission Statements:

Mission 1 - Build with Utility in Mind

Our mission is to build a project where our community can derive real value by engaging with the MojoTrolls NFT project and ecosystem. Participating in raids, and quests or even derived business ventures that strengthens the utility of the MojoTrolls.

Mission 2 - Trollnormous Community

Since every NFT project is equal to their respective communities, we value our community building process greatly. The focus is to build a like-minded community with both experienced and inexperienced Guardians to harness each other's strengths and supplement weaknesses with support. Through collaboration and co-creation the community will contribute, innovate and shape the future of the MojoTrolls Mojosphere and ecosystem. Besides being on the forefront of building the MojoTrolls project, participating community members will be rewarded for their effort benefitting the ecosystem.
MojoTrolls Mission

PART 2

Mission 3 - Sustainability of Ecosystem

Build and sustain an ecosystem befitting the MojoTrolls narrative and mission with opportunities to participate for anyone that wishes to do so. Any business revenue, royalties and transactional fees are used for rewarding activity and commitment that grows, supports or stabilizes the Troll ecosystem. Longevity is key for the MojoTrolls, we are on a mission.

Mission 4 - Growth through Evolution

While the MojoTrolls roadmap is extensive it will not be a limiting force of the project. As the MojoTrolls have evolved through years of hard work, education, and dedication to their tribe so shall the MojoTrolls project. As new ideas and technologies emerge we will continually evolve the roadmap and the project to take advantage of them. For instance, when we first began building this project AI was not as readily accessible as it is now. So we have already begun the evolution of the project by partnering with an emerging AI project that will help us integrate AI bots with both our Telegram and Twitter plans as well as build an AI driven meteverse where our community can interact with one another. We have made Evolution a core mission of the MojoTrolls project because we believe it can not be understated how important evolving along with new ideas and technologies can be for the long-term success of a project.
Who are The Mojotrolls?

MojoTrolls are not just a bunch of pretty faces. They are sophisticated creatures living in an innovative society filled with old-world magic and new technological advancements. MojoTrolls constantly engage in the battle to gain "Mojo", their vital life force, and ancient magic that is passed down from their Ancestors.

When young MojoTrolls come of age they are sent out on their first quest to help them determine which of the Clans they will fit in with best (more on this later). From this point on MojoTrolls will venture out on many quests for their Clan, each with its own purpose and each helping them gain more and more Mojo.

Through Clan Quests, $TUSKS sacrifices, and by any means necessary, MojoTrolls are always trying to gain wisdom and strength by increasing their Mojo. Though there is a friendly competition between the Clans, each uses its strengths and specialized knowledge to further the cause of the entire MojoTrolls Tribe. One theme that remains constant in all the Clans is their desire to expand the population and bring as many new MojoTrolls into their Clan as possible.

Read below as we break down their complex society and explain the intricacies of how the MojoTrolls accomplish their goals.

The Clans

The MojoTrolls are divided into clans as introduced in the MojoTroll lore. The members of each of these Clans possess special skills and have particular character traits that allow them to fit into a particular Clan. The Clans will all be described in detail with backstories laid out in the lore, some of which will be community-driven. There will be three Clans at the start, with more to come later.

Clan 1
Warriors

They are most connected with their PRIMAL predecessors. These MojoTrolls are tough and still like a good fight like their Primal Ancestors but only when it is absolutely necessary to defend the Clan, the Tribe, or other civilizations. They are the best Guardians against bad actors and evil (internet) Trolls.

Clan 2
Techies

They are the most evolved. The Techies are the engineers of the Mojosphere. Techies are always looking for a technical solution to a problem. Constantly in search of new worlds for unknown technologies they can bring back and adapt for the betterment of the MojoTrolls. These Trolls are the most in touch with the cybersecurity of the metaverse and prepare for the defense against tech predators.

Clan 3
Educators

The Educators are patient, kind and highly intelligent MojoTrolls that pass on all the knowledge of their ancestors to the new generations. They are the teachers of the Tribe who are most in touch with Onboarding new people, helping them find their way in the metaverse whilst guarding and guiding them safely through it.
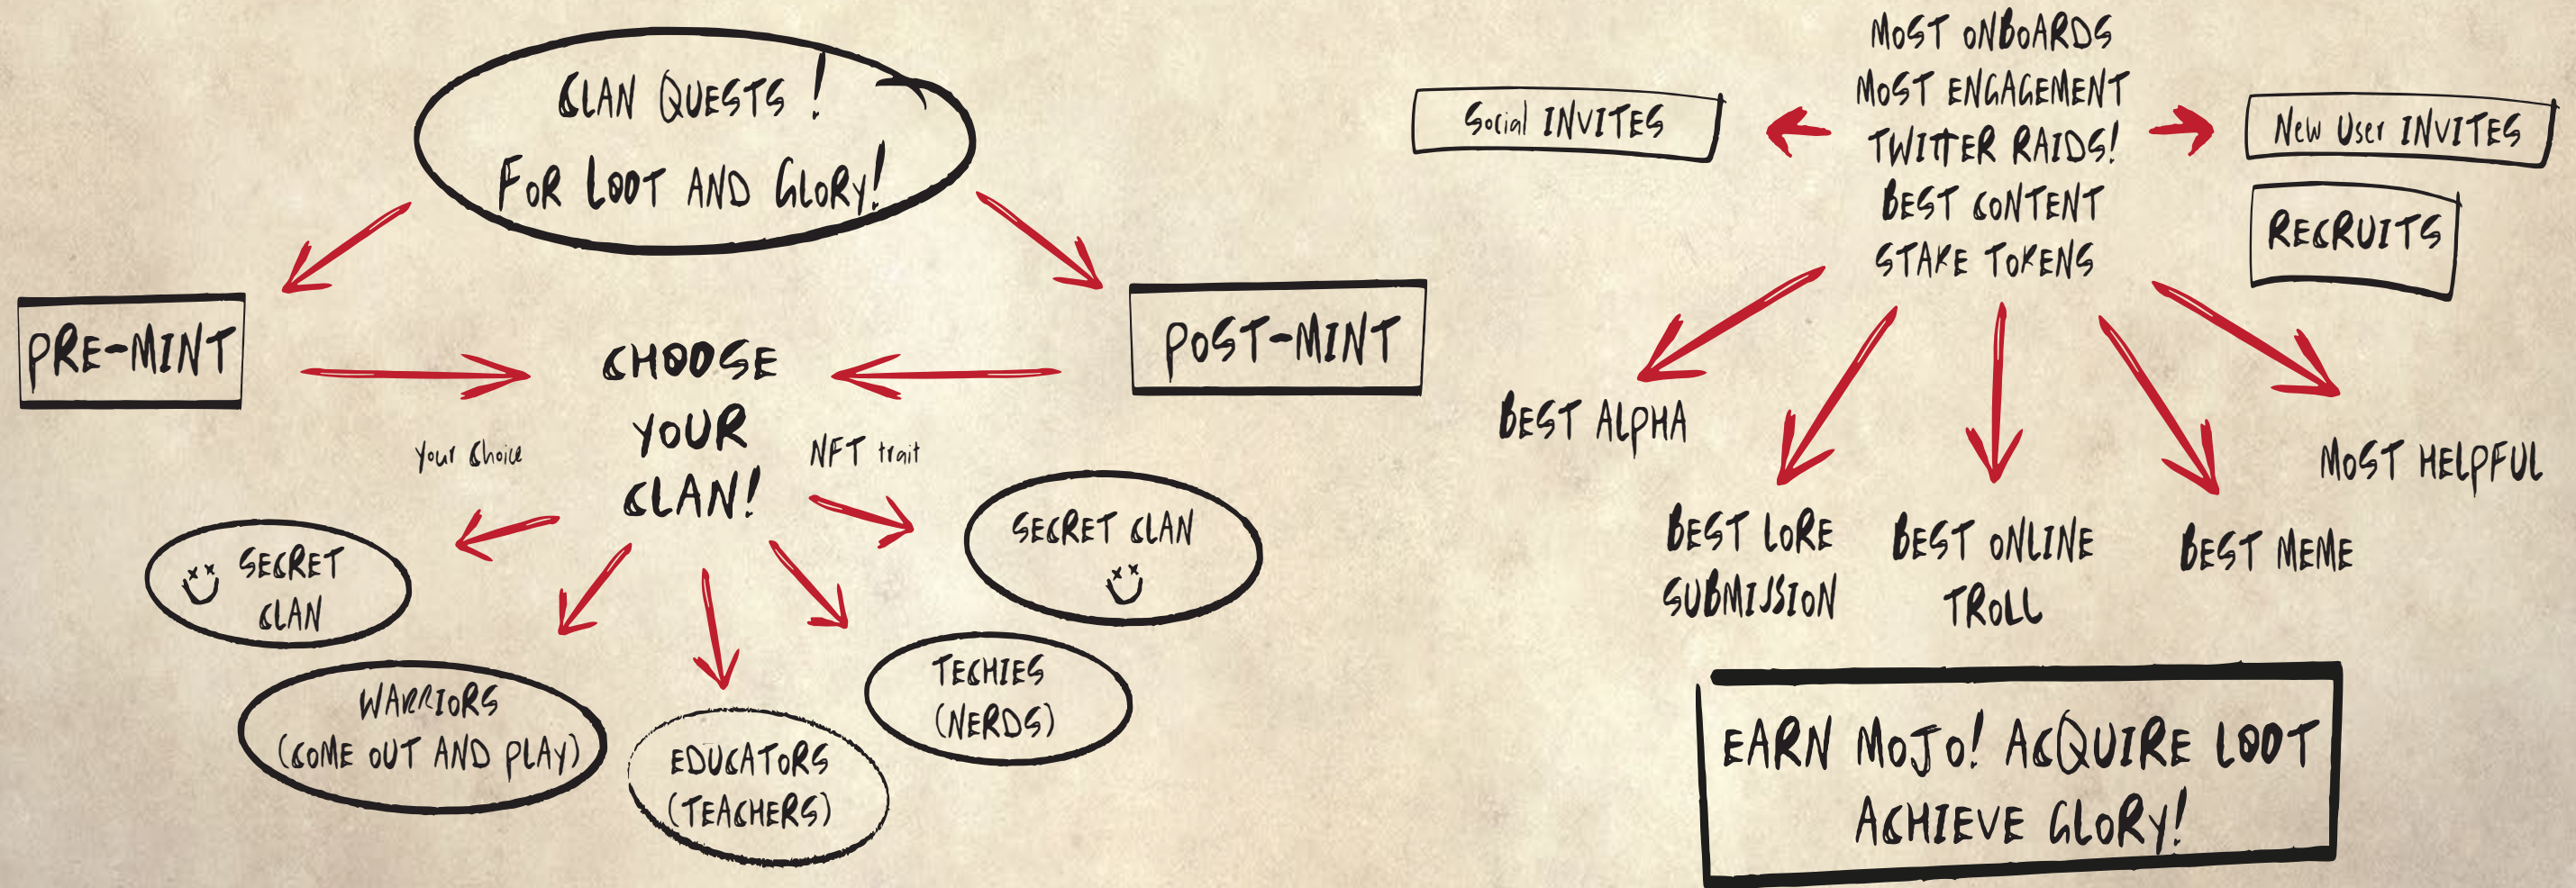

Clan 4
HIDDEN

Super rare Clan to be discovered by the most brave MojoTrolls as the lore unravels.

Clan Quest

Each member is able to pledge allegiance to one of the three initial Clans, which will hold Clan Quests to test their Trollish superiority over the other Clans. The Clan quests will foster friendly competition amongst the clans and help drive community development and engagement.

Clan Quest
PART 2

After mint, each member will unveil their prized MojoTrolls NFT and based on the kind of NFT you get; you will pledge your allegiance to one of three Clans. There seems to be a super rare Clan, and if you are lucky enough to summon one during the reveal, you will unlock additional perks and benefits.

Clan quests allow for gamification of activities, tasks and duties you can carry out as a community in friendly competition with other Clans. MojoTrolls Project will track your Clan's progress during the quest and display it on a leaderboard on your quest to glory, fame and rewards.

After your Clan's victory, you will partake in the share of the main prize pool and Mojo Ancestral Power. The rewards pool allocation is determined by the number of members participating in the quest and your ranking within your Clan. Your Mojo allocation is important because it allows you to level up in your ranking for superiority and earn a more significant percentage of the rewards pool.

There will be other incentives for engaging Clans and Clan members, but we will leave that as a surprise for later.

If quests and competitions are not your style don't worry, there are many opportunities for rewards without needing to actively participate. (more on this later)

Description of activities:

Onboards

In Onboarding new members to the community and people into the crypto and NFT space in general lies tremendous value for all. Initially these Onboarding activities are geared towards the growth of the social channels in anticipation of the NFT launch. After launch the Onboarding focus shifts towards inviting people new to crypto into our AI Elders Chat room where they can learn all about crypto and hopefully choose to join our community and bring more of their friends along too.

Clan Quest
PART 3

Engagement

The crypto and NFT space currently is an attention driven market, whereas most projects are competing for the same attention span of the NFT enthusiasts, MojoTrolls also seeks to onboard new users to crypto and bring them into our ranks. Driving the engagement towards the MojoTrolls ecosystem benefits all MojoTrolls, thus is a valid activity to reward.

Twitter Raids

Subsection of the Engagement activities focused on organized Twitter activity to drive attention towards a specific piece of content.

Content

Content creation does not only fall into the responsibility of the MojoTrolls team. Often times the best pieces of content come from the community and there are treasures of talent in each community.

Alpha

In taking care of your fellow MojoTrolls, the sharing of Alpha information of great opportunities in the space could prove an important part as well. Anything that benefits the MojoTrolls ecosystem and the individuals in it deems to be rewarded.

Lore Submission

To push co-creation and joint ownership of the MojoTrolls narrative, the lore is subject to input from the community. As the lore is an important part in the entire MojoTrolls Mojosphere, the best submissions for Lore content are rewarded.
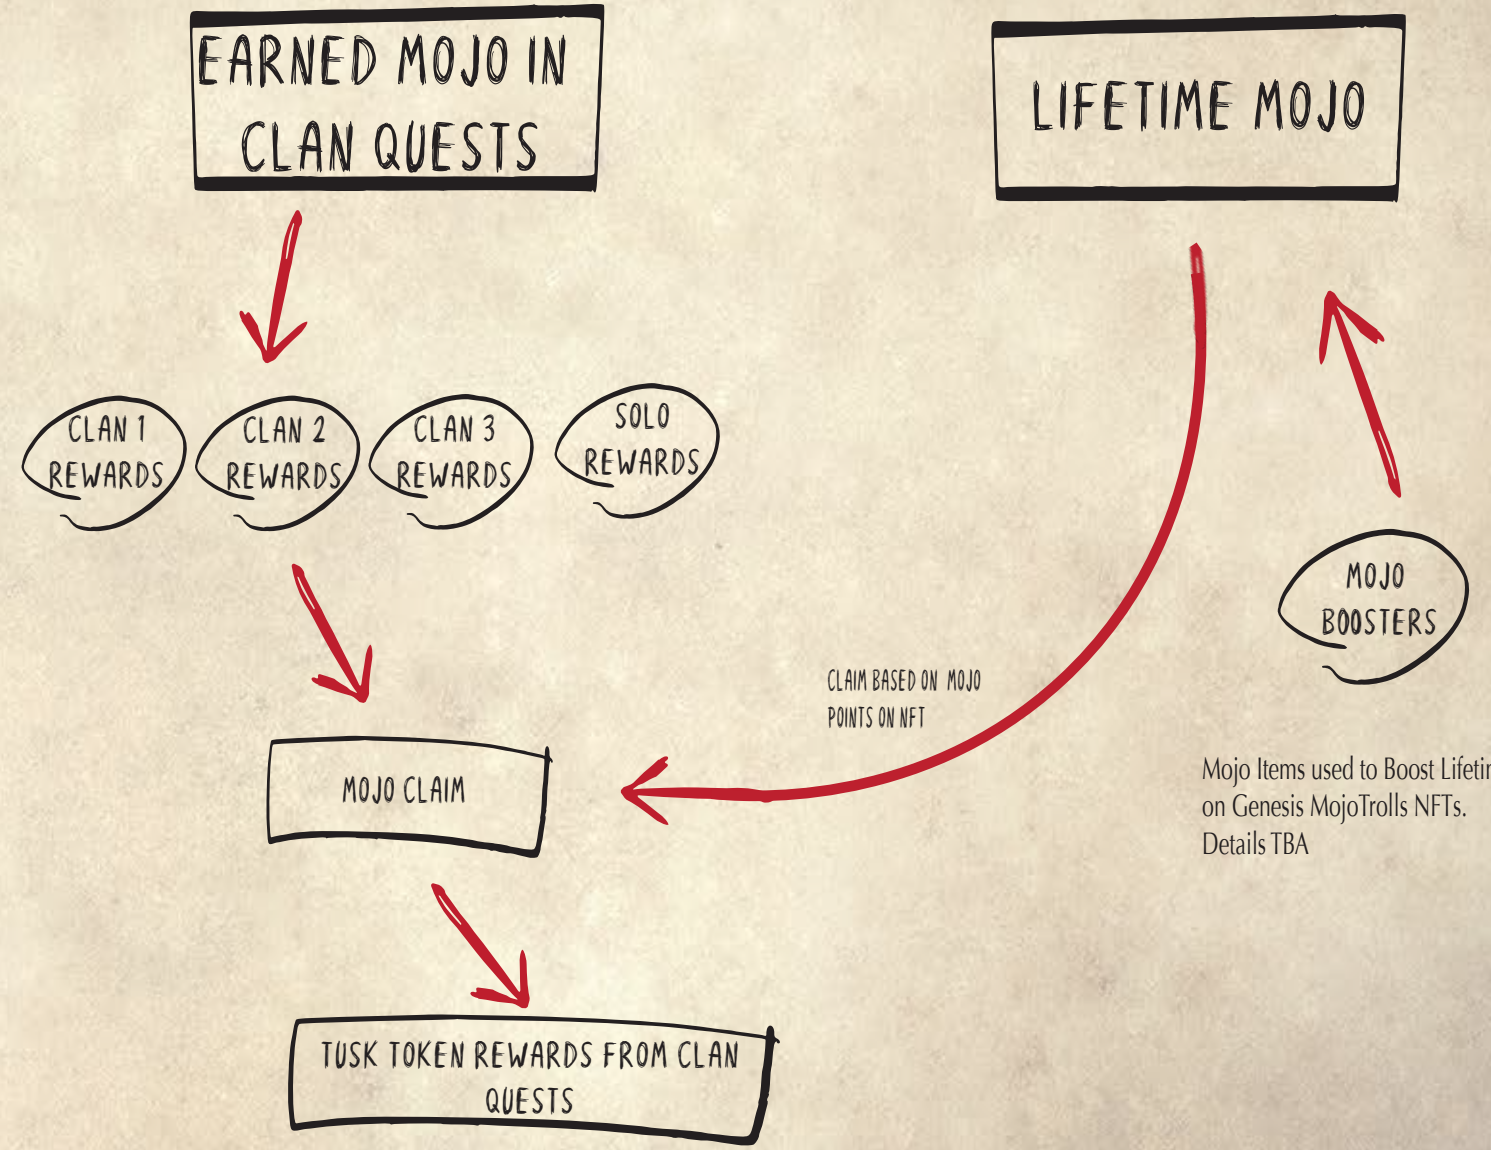

Mojo

According to the Lore: "Mojo is the life essence Trolls crave and need for Voodoo and other practices. It is either taken from other Trolls, earned by gaining reputation or extracted from converting new souls." This relates to both the Mojo earned and the lifetime base Mojo on the Genesis NFT.

The function of Mojo is to act as a counter for rewards received in the Clan Quests or other activities. Users can choose to convert their Mojo into $TUSKS tokens. Users may also choose to sacrifice $TUSKS tokens in order to claim more Mojo. This will allow users who may not want to participate in the Clan Quests to increase their Mojo holdings and move into higher staking pools (more on this below).

The Genesis NFTs will have a certain amount of Mojo attached to their NFT, which allows them to start the Clan Quests with that amount of Mojo. At the end of the Clan Quests, this will count for claiming $TUSKS tokens as well, regardless of their effort.

TUSK TOKEN REWARDS FROM CLAN QUESTS

Tusks Tokens

Introducing the $TUSKS token. In the world of Trolls, $TUSKS are the ultimate showcase of power and reputation. Hence Trolls will go to extraordinary lengths to gather more $TUSKS, to harness the power of the fallen Trolls they belonged to by sacrificing them.

The $TUSKS token is a deflationary utility token, used in the Mojosphere ecosystem for multiple purposes. In accordance with the Lore, the accumulation of $TUSKS is achieved by growing, supporting and stabilizing the Tribe. The MojoTrolls that accumulate the most $TUSKS will be able to create better conditions for themselves by sacrificing more for a vast array of perks.

The ecosystem, harnessing the utility of the $TUSKS token, thrives with expanding that same utility of the $TUSKS token in every possible way. All activities are connected with the $TUSKS token, thereby fueling the ecosystem with its deflationary characteristics.

Fueling of the ecosystem and the deflationary characteristics of $TUSKS are achieved through a set of fees on transactions and DEX trades, token sacrifices for perks, the NFT secondary market royalties, profits from our investment pool and AI trading bot, and finally a portion of additional business revenue. Accrued fees in tokens other than $TUSKS which are dedicated to the ecosystem will be converted to $TUSKS on the DEX. These ecosystem fueling rulesets are each on their own distribution schedule. See the figure below:
Fee Splitter

Fee Splitter Distribution		Fee Structure		NFT Royalty Distribution		$TUSKS Sacrifice	
Tribal Vault	70%	Transaction Fee	5.00%	Fee Splitter	90%	Project Vault	70%
Project Vault	20%	Sell Fee	5.00%	Buyback & Burn	10%	Tribal Vault	20%
Guardian Vault	10%	Buy Fee	5.00%			Burn	10%
		NFT Royalty	7.50%				
		*fees subject to change					

The Fee Splitter is a smart contract which accumulates the Fees levied on the transactions of $TUSKS tokens, including DEX trades, (un)staking and transactions. These distributions are in a separate contract for efficiency on the transactions on which the fee is levied. Rather than splitting the fee into the different Vaults, requiring more smart contract iterations, there is one fee levied and distributed as the accrued $TUSKS on the Fee Splitter balance have reached a certain point.

65% All Other Ancestral Nodes → **Up to 4 Nfts rewards based on Ancestral Power Rank**

Top 21 Ranking with up to 4 Warriors

Top 21 Ranking with up to 4 Techies

Top 21 Ranking with up to 4 Educators

10% Guardians

Sacred Guardian Nodes (610 Total) Rewards based on Pyramid Ranking

Fee Structure

The base fee levied on all transactions is set to 5%. This fee may be raised for a short time as the initial liquidity pools are added to prevent bot attacks. This fee may also be lowered in the future depending on ecosystem needs.

The NFT royalty is set to 7.5%, which is required to fuel the ecosystem with rewards as this royalty is mostly used for ecosystem growth and stability.

NFT Royalty Distribution

The NFT secondary market royalties, are distributed as following:

Buyback & Burn 10%

As all interactions with the ecosystem support the deflationary aspects, so should the royalties collected on the secondary NFT market. 10% of secondary market royalties will be converted to $TUSKS, and consequently burned.

Fee Splitter 90%

In order to support continuity of the project there is a large portion allocated to the Fee Splitter to be used for future development of the MojoTrolls brand and ecosystem.

MojoTroll Nodes

Sacred Guardian and Ancestral Nodes

MojoTroll Nodes are the first stage in the launch of the MojoTrolls project. There are two types of Nodes (Sacred Guardian and Ancestral) with each having their own unique properties and perks for their owners. While perks are nice, these Nodes bring with them an even more important trait. They make their holders part of the ecosystem from the beginning, designating them an OG MojoTroll and one of the select few who will reap the OG rewards.

These Nodes will be minted as NFTs to begin the project. They will earn rewards in separate reward pools and be the key to unlocking the Mojosphere. Later on in our journey these Nodes will secure our ecosystem while continuing to earn their owners outstanding rewards.

Please see our Gitbook for more detailed information:

https://mojotrolls.gitbook.io/documentation/mojotroll-nodes

Tusks Sacrifice

In accordance with the lore, $TUSKS are sacrificed for personal perks of the MojoTrolls and the process benefits the entire Tribe. Hence the perks in the MojoTrolls ecosystem are gained by sacrificing $TUSKS tokens. The sacrificed tokens are distributed among the Tribal Vault, the Project Vault and Token Burns.

These distributions are an ecosystem support action, benefitting the entire Tribe. The portion distributed to the Tribal Vault helps maintain the rewards pool. The portion distributed to the Project Vault is to both offset potential costs to provide the perks and further develop the ecosystem. The portion burned will help the deflationary aspects of $TUSKS token.

As the ecosystem matures, there will be more exciting perks and rewards that will be unlocked.
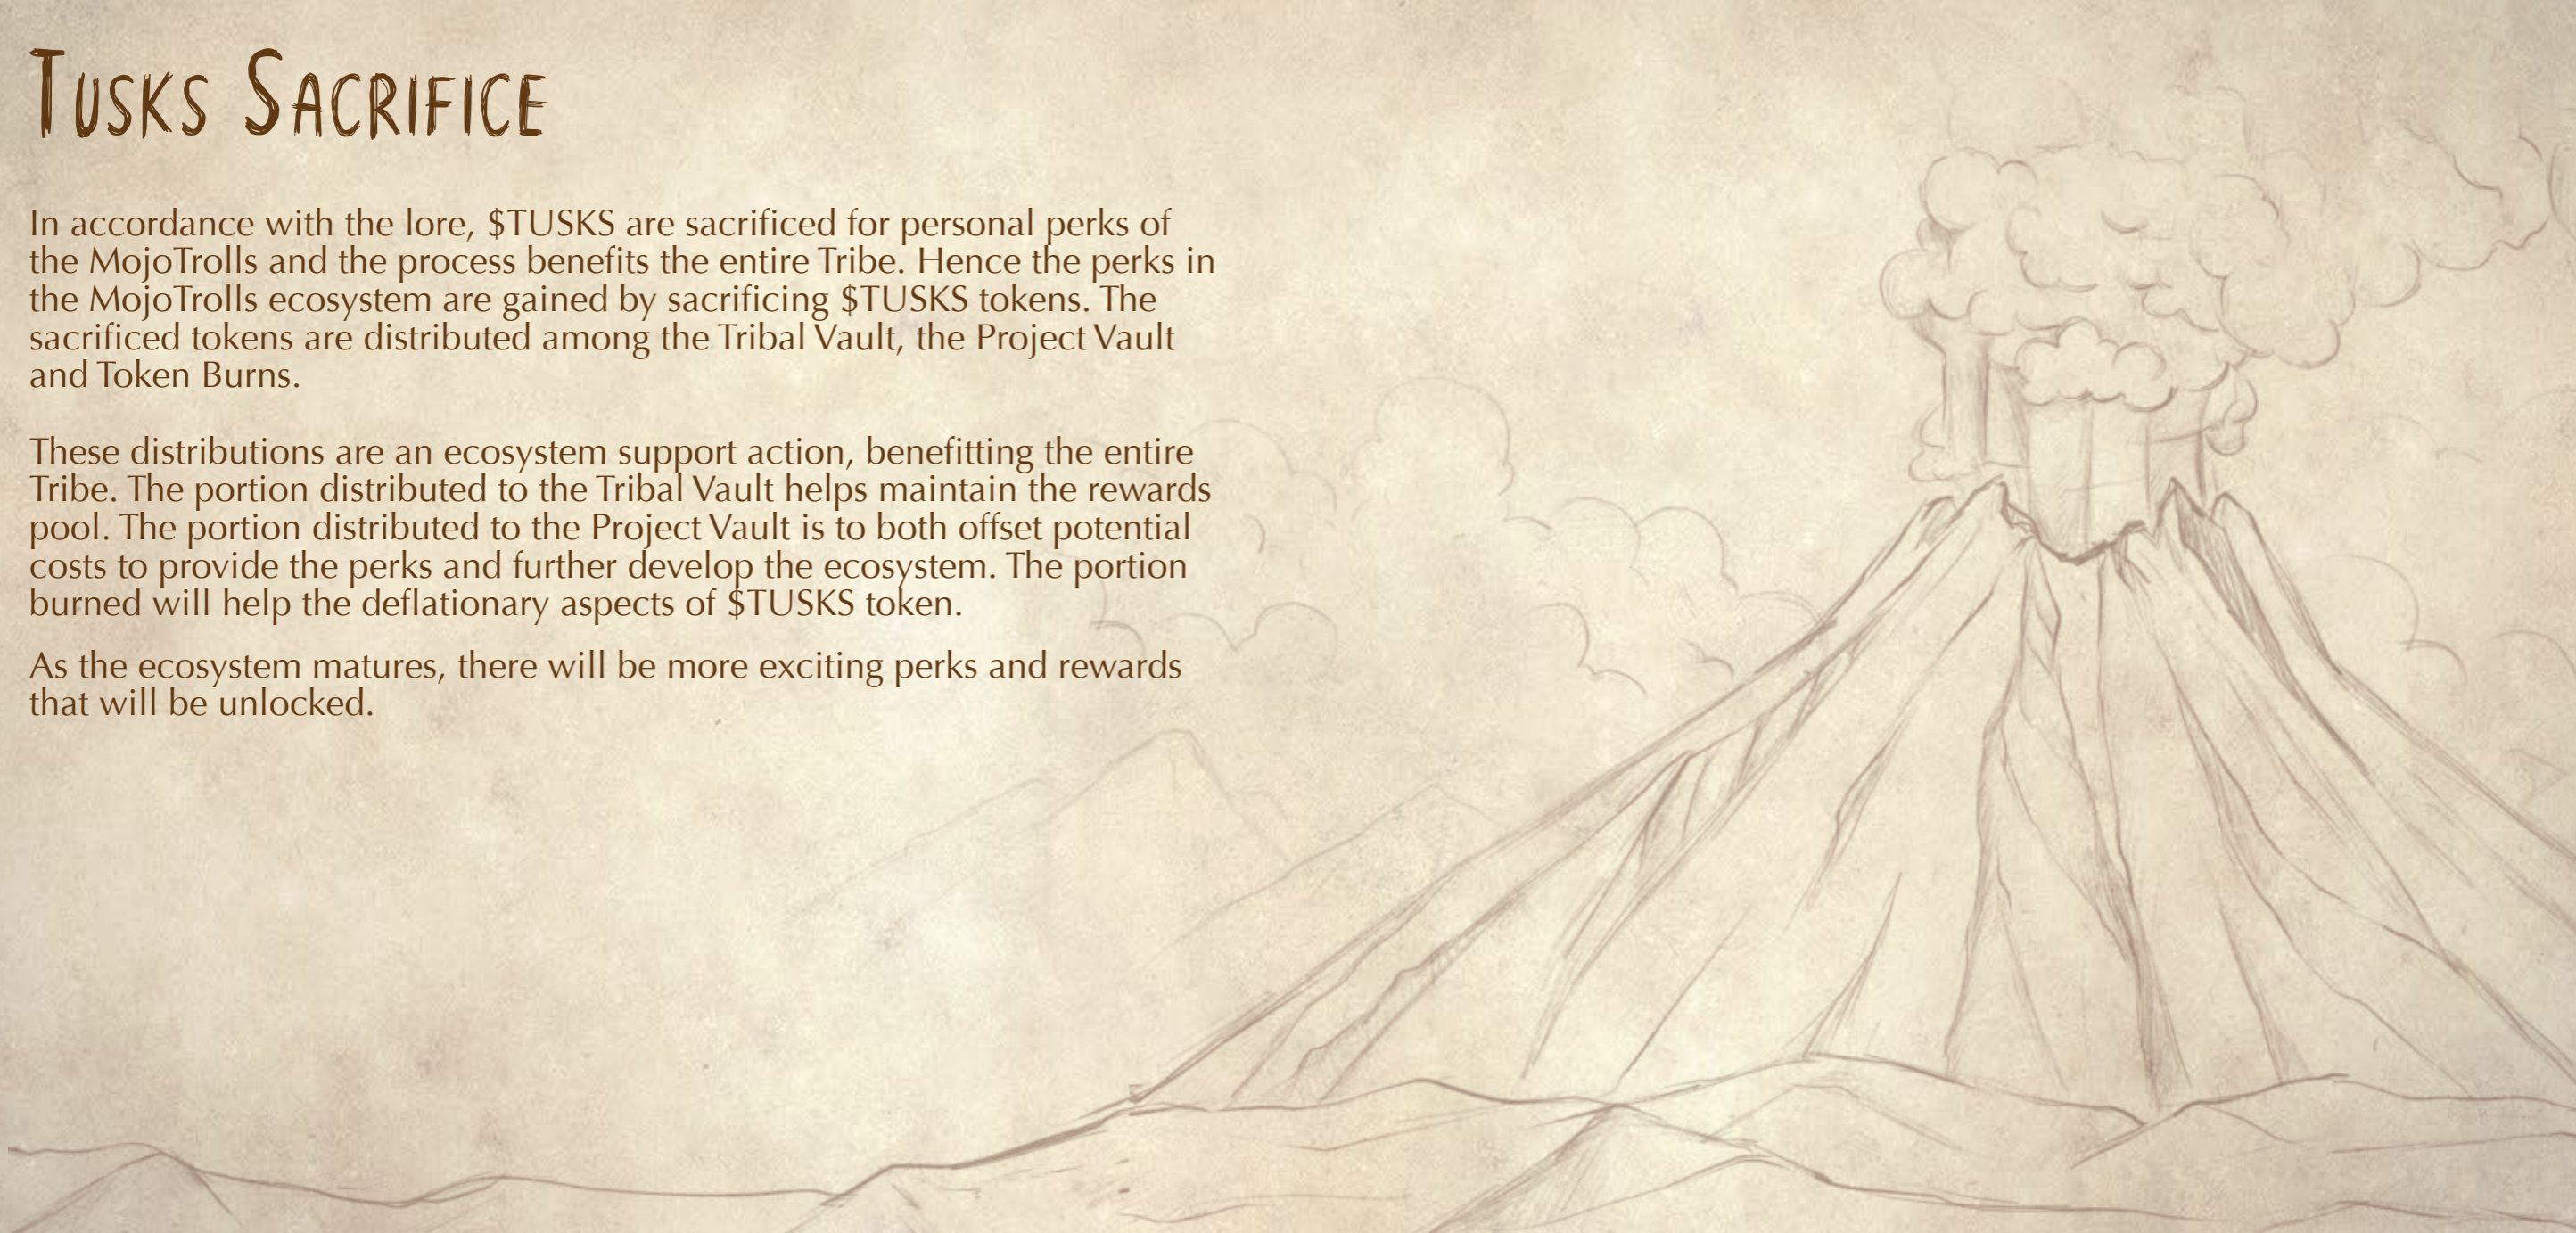

Use Case For $Tusks Token

In order to provide longevity to the ecosystem we require a lot of utility for the $TUSKS token. While some future utility might still be under wraps, the following use cases for Sacrificing your $TUSKS are in the works. The key to creating a healthy ecosystem around $TUSKS sacrifices is that a lot of small sacrifices fueling the ecosystem are more stable than just a couple big ones. In accordance with the Lore, sacrifices should benefit the entire Tribe.

PROJECT VAULT

Use Case
part 2

Mojo for reward boosts
Mojo is used to climb the Ancestral Power leaderboard and redeem a greater claim on the $TUSKS from the Tribal Vault. However, with these reward cycles from the Tribal Vault being in intervals it might be interesting for users to sacrifice some $TUSKS for Mojo to redeem more $TUSKS rewards. Game theorists might excel in this area and spot the opportunities.

Merch and TrollShop
All merchandise, products and services will be entirely or at least partly available in $TUSKS. The base costs of offering these merchandise items, products and services are held by the project and the rest is allocated to the Fee Splitter.

Accesslist spots token and NFT projects
As our ecosystem and community grows, the MojoTrolls are able to secure increasingly sought after token and NFT projects. If these projects work with accesslisting and public sale, we use the brand exposure to secure a portion of these spots. To secure one of these spots as a community member you can sacrifice some $TUSKS, for which you shall receive Mojo to redeem in the next Tribal Vault cycle, but the top sacrificing MojoTrolls will receive the spots.

Featured animations and comics - NFT
The MojoTrolls brand plans to partner with animators and comic creators to create custom animations and comics for the MojoTrolls NFTs. The Genesis NFT holders are offered to sacrifice some $TUSKS and get their own featured animation or comic section.

MojoTrolls brand NFT drops
The Mojosphere will expand and require more NFT drops to include more participants. These will be either free drops for Genesis NFT holders or more exclusive and redeemable based on $TUSKS sacrifices.

Premium experiences
Nurturing and connecting with the community is an important aspect for the MojoTrolls, especially because we want to spearhead the co-creation section of the NFT space. Meet-ups, special luxury experiences and all activities focused on connecting put up by the community (co-creation) are in the cards for $TUSKS sacrifices.
Tuskenomics

MojoTrolls seeks to bring the worlds of NFTs, DeFi and Fantasy together with the ultimate rewards based ecosystem and strong community of Fantasy enthusiasts. Our flagship TUSKS token will be launched on the Solana blockchain allowing for fast and inexpensive transactions. Our vision is to create a token that not only appreciates in value but also contributes to the overall growth of the ecosystem. Departing from traditional pre-sales, we have embraced an innovative approach to initial token distribution. There will be no private sales involved with the TUSKS token launch. There will be only two ways to receive TUSKS token. Purchase a Sacred Guardian Node with embedded tokens, or purchase on the open market after TGE.

Deflationary Token

TUSKS token is the backbone of the MojoTrolls ecosystem and as such, token stability and long term growth is very important. With this in mind TUSKS token will be used for all purchases within the ecosystem with a portion of every purchase burned forever which will permanently remove TUSKS from the total supply.

Tuskenomics PART 2

TUSKS Staking and Transactional Tokenomics

To ensure the strength and stability of our network, we implement a 5% transaction tax on all buys, sells, and transfers of TUSKS tokens, as well as a 7.5% royalty on secondary market NFT transactions. We are committed to fostering long-term value and loyalty among our token holders. To incentivize staking, promote community engagement, and reward Node holders we distribute 10% of all transaction fees to Sacred Guardian Node holders who stake TUSKS to their Nodes. This will be combined with another 70% of all transaction fees feeding our investment pool which rewards NFT holders and the entire MojoTrolls ecosystem. Your Ancestral Node rank on the Ancestral Power Leader Board determines the payout you receive.

Supply Tokenomics

87.8% Released into initial Liquidity Pool

12.2% Embedded in Sacred Guardian Nodes

*See "Fee Splitter and Rewards Diagram" for Transactional Tokenomics breakdown

Vaults - Rewards - Strategic Sacrifice

There are multiple vaults active in the MojoTrolls $TUSKS ecosystem, These vaults are set up to collect, earn and distribute $TUSKS rewards. Rewarding those who grow, support and stabilize the ecosystem.

Tribal Vault

70% of all Fee Splitter Distributions are sent to the Tribal Vault. This vault is used to distribute these fees to the MojoTrolls Investment Pool (as detailed on the "Investment Pool" section) and the Rewards Vault.

Rewards Vault

This vault collects $TUSKS rewards from the Tribal Vault and Investment Pool and distributes them to Ancestral Node holders based on their ranking on the Ancestral Power Leaderboards. As described in section "Mojo and the Ancestral Power Leaderboards".

Project Vault

20% of all Fee Splitter Distributions are sent to the Project Vault. This vault is used to sustain the operations of the project and help the MojoSphere continue its journey down the roadmap.

Guardian Staking Vault

10% of all Fee Splitter Distributions are sent to the Guardian Staking Vault. This vault is used to reward Sacred Guardian Node holders for staking $TUSKS tokens (and later for securing the network) based on their level on the Sacred Guardian Node Staking Pyramid.

Strategic Sacrifice

In accordance with the Lore of the MojoTrolls in order to earn Mojo a sacrifice must occur. As detailed in the section "Mojo and the Ancestral Power Leaderboards", Mojo may be acquired by sacrificing $TUSKS tokens. This vault will accumulate these $TUSKS and then sacrifice them to the ancestors (burn them) in order to stabilize the circulating supply of $TUSKS and maintain the deflationary aspects of the token.

Investment Pool

One of the missions of MojoTrolls is to focus on the sustainability of the ecosystem. In order to help achieve sustainability a portion of all fees collected will be devoted to our investment pool. This pool will allow the MojoTrolls to invest in and partner with other crypto projects. Examples of these investments range from buying into node and staking pools, undervalued crypto projects, presales, etc. The rewards from these investments will be distributed as shown in the "Fee Spitter" flow chart in the following section.

This will help the sustainability of the MojoTrolls ecosystem by allowing us to set up strategic partnerships with like minded projects and bring our communities together for the prosperity of all.

A small portion of the Investment Pool will also be used to fund an amazing AI trading bot that our Techie Clan has been working on. All profits from this bot will be put back into the investment pool or paid out into the rewards vault.

As the MojoSpere advances and our Investment Pool grows we will also find sustainability by investing in Real World Assets that will allow the project to earn revenue outside of the blockchain world in order to diversify our investments and maintain reward levels even in down markets.

We believe the Investment Pool will bring in great rewards thereby adding to the gamification of the MojoTrolls NFTs as holders attempt to climb the ranks in order to receive greater rewards.

Project Revenue Model

The MojoTrolls project is not simply about NFTs. An entire ecosystem is being built around the Mojosphere that we are creating. The starting point of this ecosystem is the lore of the MojoTrolls and the Mojosphere. This lore will be the backbone of the project and lead us down our roadmap. The community will be involved with helping to shape the lore but we will follow the basic path we have laid out that focuses on the strong community bonds that the MojoTrolls rely on and the helpful nature of the MojoTrolls Tribe.

This lore will help us build a community of like minded individuals that want to see the crypto space grow and want to help onboard new users. The lore will be the starting point for our project's many revenue models that will seek to attract users who are new or even outside the crypto community.

The first of these revenue streams will be a series of illustrated novels that follow the lore of the MojoTrolls and their ancestors. Our first illustrated novel is already in production and will begin being released as marketing teasers in the coming weeks. This novel will be marketed not only to the crypto community but also fantasy enthusiasts outside of the crypto world who can be potential new crypto users.

As we begin to accumulate fees into our investment pool our next revenue stream will begin. Please see the "Investment Pool" page for details.

As our community continues to grow we will add more revenue streams that benefit the entire MojoTrolls ecosystem. These might include party games, creative art, real life experiences (like a MojoTrolls beach party at a great TikiBar) and many more as laid out in the future developments section of the MojoTrolls roadmap.

No matter which revenue stream you look at, the focus will be the same, growing the community and creating value for the ecosystem. We hope to see opportunities develop to partner with our Genesis NFT holders and help them bring their MojoTrolls business ideas to life.

ROADMAP

Sacred Guardian and Ancestral Nodes

The first stage in the launch of the MojoTrolls ecosystem will be the minting of Sacred Guardian Nodes and Ancestral Nodes as outlined in the MojoTroll Nodes section.

Pre-Mint Clan Quests

Run Gleam Competitions (leaders will be rewarded with a range of rewards including Membeship NFTs and allowlist spots for Genesis Mint).

Track social media activity and hold contests for most invites. (leaders will be rewarded with better roles which will allow them accesslist spots and possibly other rewards).

Contests and rewards.

Clan Preferences based on chosen roles.

$TUSKS Token

$TUSKS Token launch on the Solana Network. $TUSKS will be the utility token for the MojoTrolls ecosystem.

$TUSKS Token will have many uses as outlined in the pages above.

Mojo

Mojo earned in Clan Quests will be able to be sacrificed for $TUSKS Tokens.

Users may choose to hold their Mojo and continue climbing the Ancestral Power Leader Board for greater rewards in the future.

See "Mojo" page above for more information.

$AI Elder Chat Rooms

Multiple AI Elder Chat Rooms will be established that will allow new users to learn about each of the Tribes and Clans and have questions answered by our Elder Bots.

There will also be an AI Elder Chat Room devoted to onboarding new users and teaching them about crypto.

ROADMAP PART 2

≫ Genesis MojoTrolls NFT

Mint 4181 NFT Collection on the Solana blockchain.

Rarity based on all traits but heavily weighted based on the Mojo bottle. Mojo being a number trait between 1 and 1000.

The Mojo level will be derived from the rarity of the other traits. So the Mojo level would be an easy shortcut to guess the rarity of the NFT.

Collection is divided into 4 Clans - 1268 of each main Clan and 377 of a secret rare Clan based on a particular trait; such as Ears and Nose.

Holders will be able to stake their NFTs in different reward pools based on the Clan and Rarity of each NFT as shown in the "Fee Splitter" Flow chart.

The more Mojo that a MojoTrolls NFT holder collects the higher they will rank on the AP Leaderboard.

≫ Post-Mint Clan Quests

Ancestral Node holders will be able to compete in Clan Quests based on whatever Clan their Genesis NFT belongs to.

Ancestral Node holders may hold more than one Clan NFT but must declare allegiance to one Clan for a particular Clan War.

All members of the winning Clans will be rewarded with the ability to claim Mojo as well as other rewards.

Outstanding members of all teams will also receive a reward.

Each Clan will have an Ancestral Power Leader Board that is filtered out by Total, Clan and Quests.

The more Mojo that an Ancestral Guardian Node holder collects the higher they will rank on the AP Leaderboard.

≫ Investment Pool Rewards

As our investment pool builds we will begin distributing rewards to our NFT Stakers as laid out in the "fee splitter and rewards" flow chart.

≫ AI Avatar

Through a partnership with a leading 3D AI development firm we will make our entire Genesis NFT collection available as 3D Avatars to be used in the Metaverse.

≫ AI Trading Bot

The Techies clan has been developing an AI Trading Bot and will use this bot for the good of the entire MojoTrolls Tribe by using a small portion of the investment pool to seed the bot and allow it to grow rewards for the entire community.

ROADMAP
PART 3

» Future NFT Drops

> A not too distant future NFT Collection will be a part of the roadmap to give Recruits incentive to be part of the MojoTrolls community.

> New collection will be a mix of Male and Female Trolls.

> Will need to have a Female and Male in order to mint the next collection of baby trolls.

> Some future collections will be minted with proof of Sacrifice of $TUSKS instead of payment in $TUSKS so that $TUSKS rewards for the original Genesis holders are not diluted.

> The Future Collections will have somewhat lower Mojo levels than the Genesis NFTs also reducing the chances of rewards becoming too diluted.

> One of the future collections will be pets for the Trolls.

» Future Development

All future developments will have the Mojosphere Ecosystem in mind where you will be paying, sacrificing, renting or staking in our $TUSKS Token. If future development does not have an ecosystem in mind, it will not be considered.

Potential Developments under review. The community will vote on the direction of some of their favorite projects and be a part of their success.

» Payment Options:
